SUMMARY

Software developer (B.Tech CSE, 2025) working as a freelance AI trainer on Outlier, Alignerr and Chegg. I build and grade evaluation tasks for AI coding agents and assistants, and was promoted to reviewer on Outlier. Before this, I built React frontends and learning games for kids in two internships.

EXPERIENCE

Freelance AI Trainer | Outlier, Alignerr, Chegg | Remote

Feb 2026 – Present

- Harden coding benchmark tasks built from real GitHub pull requests: verify the original fix passes and the unfixed code fails, strip hints that give the fix away, and add tests so a half-done fix can't score full marks.
- Design multi-turn tasks for AI agents working inside a user's email, calendar and files, some running past 20 turns and some hinging on a detail only visible in a photo, PDF or video.
- Write weighted pass/fail rubrics, Python (pytest) checks and reference answers for these tasks, and explain exactly what the model got wrong on every item it failed.
- Promoted to reviewer on Outlier based on attempter quality. Review other contributors' tasks for rubric quality, weights and missed safety failures.
- On Alignerr, compare transcripts of two AI coding agents doing the same task and rate how they behaved, citing the exact file, command or message behind each point.
- On Chegg, write original computer science and calculus questions that three different LLMs all get wrong, note where each answer breaks, and write the full worked solution.

Software Developer (Internship) | Abhiwan Technology

Jan 2026 – Mar 2026

- Built 2D learning games for kindergarten kids using Phaser and JavaScript, covering counting, shapes, colors, animals and their sounds, and drag-and-drop activities.
- Made an A to Z alphabet game where a kid had to say each letter out loud and then write it on screen to move ahead.
- Wrote the speaking and writing checks in JavaScript, so a wrong try got flagged right away with a hint.

Frontend Developer (Internship) | Travbizz

Aug 2025 – Dec 2025

- Moved the company's travel website from PHP to React, rebuilding the existing pages as reusable components.
- Helped build the CMS pages the team used to manage travel packages, and connected them to the backend APIs.
- Styled the new pages with Tailwind CSS.

SKILLS

Languages: JavaScript, Python, C++, SQL, TypeScript

Frontend: React.js, Redux, Tailwind CSS, HTML5, CSS3, Phaser

Backend: Node.js, Express.js, REST APIs, JWT authentication

Databases: MongoDB (Mongoose, Atlas), SQL

Tools: Git, GitHub, Docker, pytest, Postman, Vercel, Render

AI Evaluation: RLHF, rubric design, agent evals, SWE-bench-style task hardening, safety annotation, multimodal tasks

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

Secure Notes App | MERN Stack | [Live demo](#)

- Full-stack notes app with signup and login using JWT and bcrypt, plus role-based access control.
- REST API in Express with input validation and error handling. Added MongoDB indexes for the most common queries.
- Frontend on Vercel, backend on Render, database on MongoDB Atlas.

Book Store | React.js | [Live demo](#)

- Online book store with login, search, cart and checkout, built from reusable React components.
- Responsive layout with Tailwind CSS, with state handled through React hooks.

EDUCATION

B.Tech, Computer Science & Engineering | Meerut Institute of Technology | 82.3%

2021 – 2025

ACHIEVEMENTS & ACTIVITIES

- Solved 200+ problems on [LeetCode](#) and 150+ on [GeeksforGeeks](#) | TCS NQT: 78.21% | AMCAT certified
- Vice Event Head, GeeksforGeeks Chapter | Vice President, CES Society | Class Representative
